Roseville mom charged with child neglect

By PAT PHEIFER
ppheifer@startribune.com

It was 7 degrees with a wind-chill of 5 below zero when a 4-year-old Roseville girl dressed in a thin T-shirt and socks was found running along a snow-bank outside an apartment building in late January, court documents said.

When the girl's mother was found, she initially told police she'd spent the night at a friend's house and asked another friend to baby-sit the girl and her 12-year-old brother. She later said she'd spent the night at Mystic Lake Casino and hadn't found anyone to watch the children, the documents said.

Angela M. Johnson, 35, of Roseville, has been charged in Ramsey County District Court with one count of child neglect, a gross misdemeanor.

According to the criminal complaint, which was made public Friday, a woman called police about the 4-year-old at 8:45 a.m. Jan. 25.

When officers arrived, the girl told them her hands and feet hurt, her mother had gone to their grandmother's house and her brother had left for school. She didn't know her last name, her brother's name or what school he attended, the complaint said.

Officers found the girl's apartment and learned her

name. She did not suffer frost-bite or other injuries, the documents said.

Johnson called police when she returned home about 10:30 a.m.

After telling one story, Johnson then admitted she'd spent the night at the casino and "had assumed her son would stay home [from school] until she arrived," the complaint said.

The Roseville case is the most recent of a string of cases in which children have been left to fend for themselves or have been found outside improperly dressed and without supervision.

Changes in the New DSM-5 System for the Problem Gambling Construct

Term

Old: *Pathological Gambling*

New: *Gambling Addiction*

Where classified

Old: *Impulse Control Disorder, Not Classified Elsewhere*

New: *Substance Use and Addiction Disorders*

Criteria

Old: 10 criteria; 5+ needed for diagnosis

New: 9 criteria; 4+ needed for diagnosis

DSM-5 Gambling Disorder

Frequencies for Diagnostic Variables ($N = 835$; adapted from Stinchfield et al., 2000)

DSM-5 Symptoms	Total %	Males %	Females %
Preoccupation	87	84	92
Need to increase	68	64	75
Unsuccessful controlling	84	82	88
Restless cutting down	73	73	73
Escaping from problems	79	72	89
Chasing loses	84	82	86
Personal negative conseq.	89	84	97
Reliance on others	78	73	84
DSM-IV - Legal problems	46	44	50

Similarities of Gambling Disorder and Dependence

Gambling Disorder

Preoccupation with gambling

Need to gamble more

Unsuccessful control/stop

Restless when cut down/stop

Chases loses

Jeopardized relationships/job

Dependence

Great deal time using/obtaining

Tolerance

Unsuccessful control/stop

Withdrawal

Drug taken in larger amounts

Important social/occupational given up or reduced

Quiz

How likely are females more than males to ...

- | | | | |
|---------------------------------|------|------|------|
| 1. Become a problem gambler? | more | less | same |
| 2. Spend more time gambling? | more | less | same |
| 3. Start gambling at older age? | more | less | same |
| 4. Seek treatment? | more | less | same |

Quiz

Warning Signs at Home

There are overdue or unpaid _____.

The spouse/SO finds an _____ in the number of active credit cards

The gambler is _____ about money.

The spouse/SO discovers _____ cell phone calls on the phone bills.

The bank reports frequent _____ _____.

Take Home Points

Appreciate that PG is not simply a weakness of will power

Today's Talk

- Background

Habit #1 : Understanding Definition, Symptoms, & Etiology

■ Clinical issues

Habit #2: Use standardized measures when assessing

- Habit #3: Co-existing disorders
- Habit # 4: Intervention and treatment

Ultimate Assessment Instrument

Do you have a gambling disorder?

**Several assessment measures available to
clinicians and researchers**

Relatively Good News

Lie/Bet Screen

(Johnson et al., 1997)

2-question version of the DSM-IV criteria:

1. Have you ever had to lie to people important to you about how much you gambled?
2. Have you ever felt the need to bet more and more money?

Lie/Bet Screen

(Johnson et al., 1997)

Endorsing one or both questions had a hit rate of 95% (GA vs non-problem gamblers)

2-item outcome	GA	Controls
Positive	true+ : 190	false+ : 16
Negative	false- : 1	true- : 155

SOGS

(Lesieur & Blume, 1987; 1993)

**Screening tool that has been used for
epidemiological and clinical purposes**

SOGS has accumulated the most research

**In the Shaffer et al. (1997) meta analysis of 152
prevalence studies, over half used the SOGS**

**20 scored items; several address sources of
borrowing**

6-month or one-year time frame recommended

GAMTOMS

(Stinchfield et al., 2000)

Gambling Treatment Admission Questionnaire

Significant Other Intake Questionnaire

Client Discharge Questionnaire

Client Follow-up Questionnaire

Significant Other Follow-up Questionnaire

Gambling Treatment Services Questionnaire

Distorted Cognitions

- **Gambler fallacy's** (illusion of control)
- **Biased attribution** that winnings are caused by one's skill

Distorted Cognitions

- **I can beat the house.**
- **I am close to a win.**
- **Superstitions are effective.**

Quiz

Warning Signs at Work

The company discovers the individual using the _____ at work to gamble.

The individual is _____ from co-workers.

The person is taking long _____.

The individual asks for an _____ in pay.

He or she is organizing or taking excessive interest in office _____.

Take Home Points

appreciate that PG is not simply a weakness of will power

Use at least one standardized tool when conducting your clinical assessment

Today's Talk

- Background

Habit #1 : Understanding Definition, Symptoms, & Etiology

■ Clinical issues

☐ Habit #2: Use standardized measures when assessing

Habit #3: Address co-existing disorders

— Habit # 4: Intervention and treatment

Co-Existing Disorders

Increased Likelihood of Pathological Gambling when Other Disorders Present

Disorder	OR	95% CI	sig.
Major Depression	5.1	2.2 – 12.0	<.001
Any Anxiety Disorder	3.9	1.8 – 8.8	<.001
Any Impulse Disorder	4.0	1.7 – 9.1	<.001
Any Substance Use Disorder	7.2	1.6 – 32.8	<.001
1+ Disorder	3.4	1.1 – 10.6	<.01
2+ Disorder	5.3	1.9 – 14.9	<.001

PG and other disorders

(Kessler et al., 2008)

Disorder	Prevalence of disorder among those w/PG	Temporal Sequence among those with PG and other disorders		
		PG first	Other disorder 1 st	Onset at same time
Any mood dis.	56%*	23%	65%	12%
Any anxiety dis.	60%*	13%	82%	4%
Any SUD	42%*	36%	57%	6%
Any impulse dis.	42%	0%	100%	0%

* Prevalence significantly greater among PGs compared to the rest of the sample ($p < .05$).

Issues When Treating the Dual Disordered Problem Gambler

Become fluent in the language of problem gambling

Have a separate support group to deal with gambling issues

Motivation level may not be the same for the problem gambler

Gambling can be a source of relapse

Take Home Points

- Appreciate that PG is not simply a weakness of will power
- Use at least one standardized tool when conducting your clinical assessment

You can do it! Apply your addiction counseling skills when working with a problem gambler.

Today's Talk

- Background
 - Habit #1 : Understanding Definition, Symptoms, & Etiology

■ Clinical issues

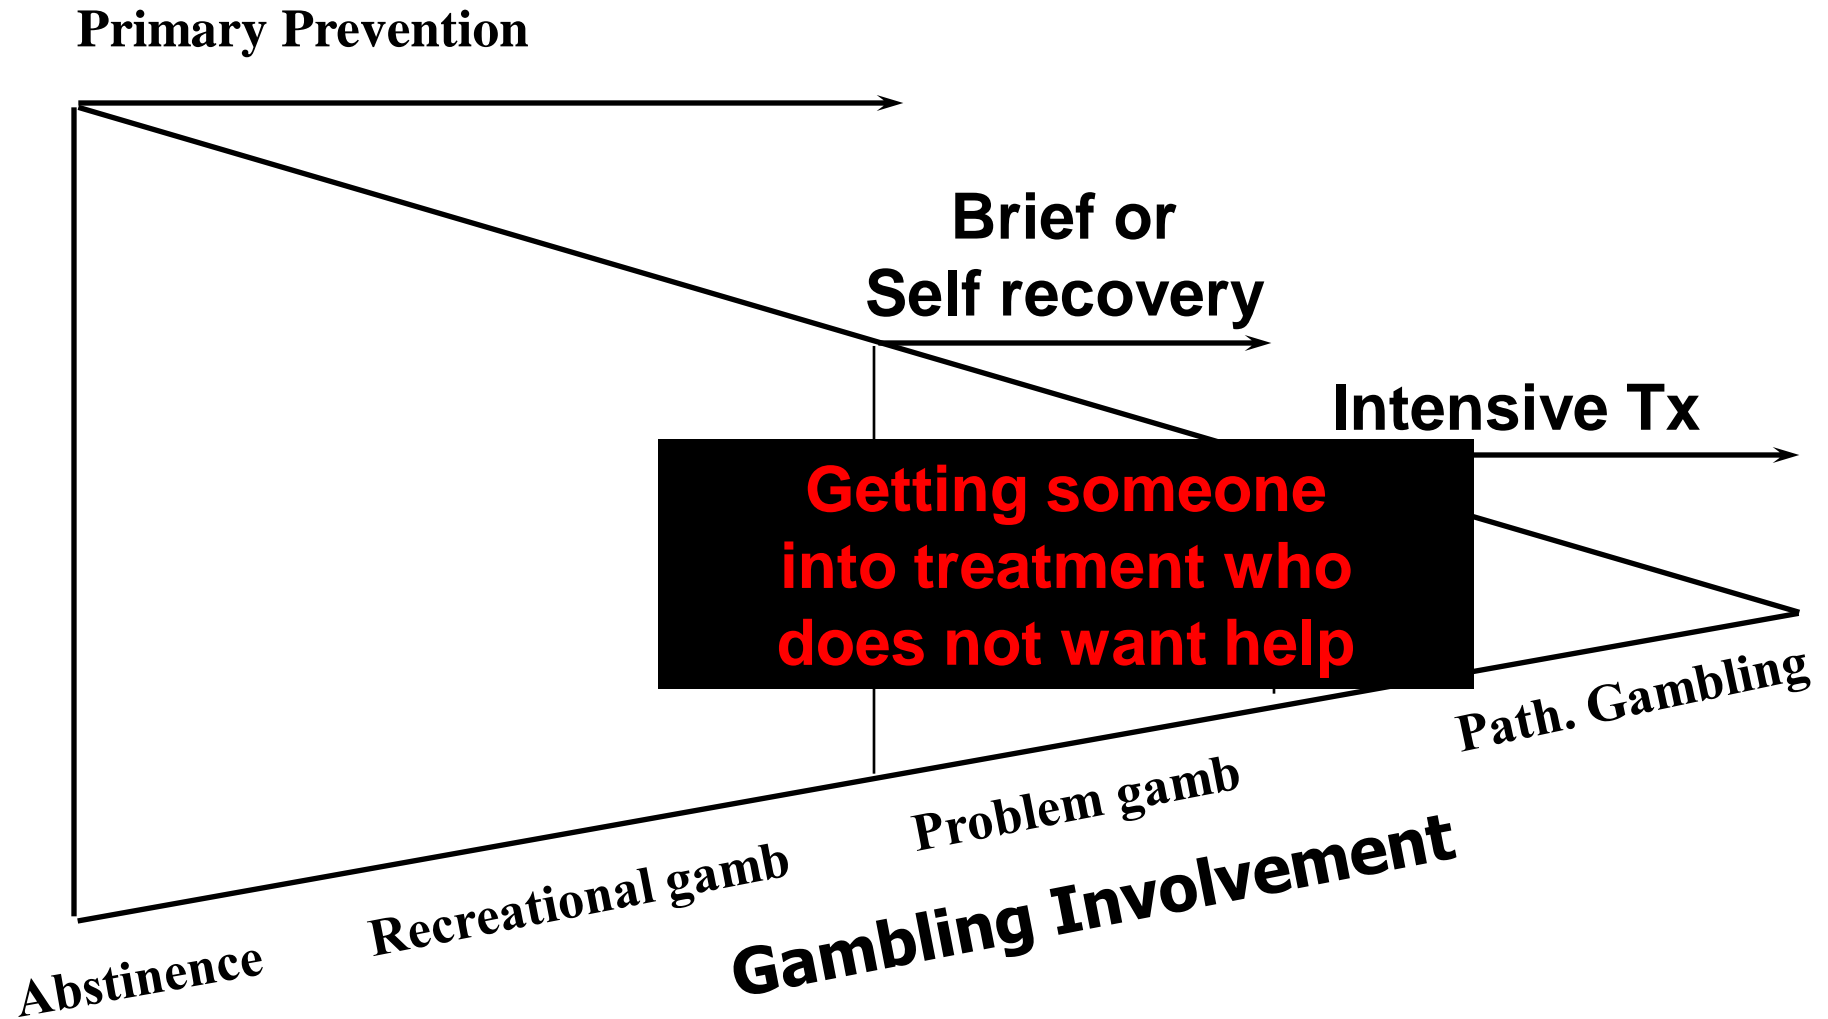

- Habit #2: Use standardized measures when assessing
- Habit #3: Address co-existing disorders

Habit # 4: Appreciate that Interventions and treatment approaches can work

Treatment Continuum

Adapted from *Broadening the Base of Alcohol Treatment* (IOM)

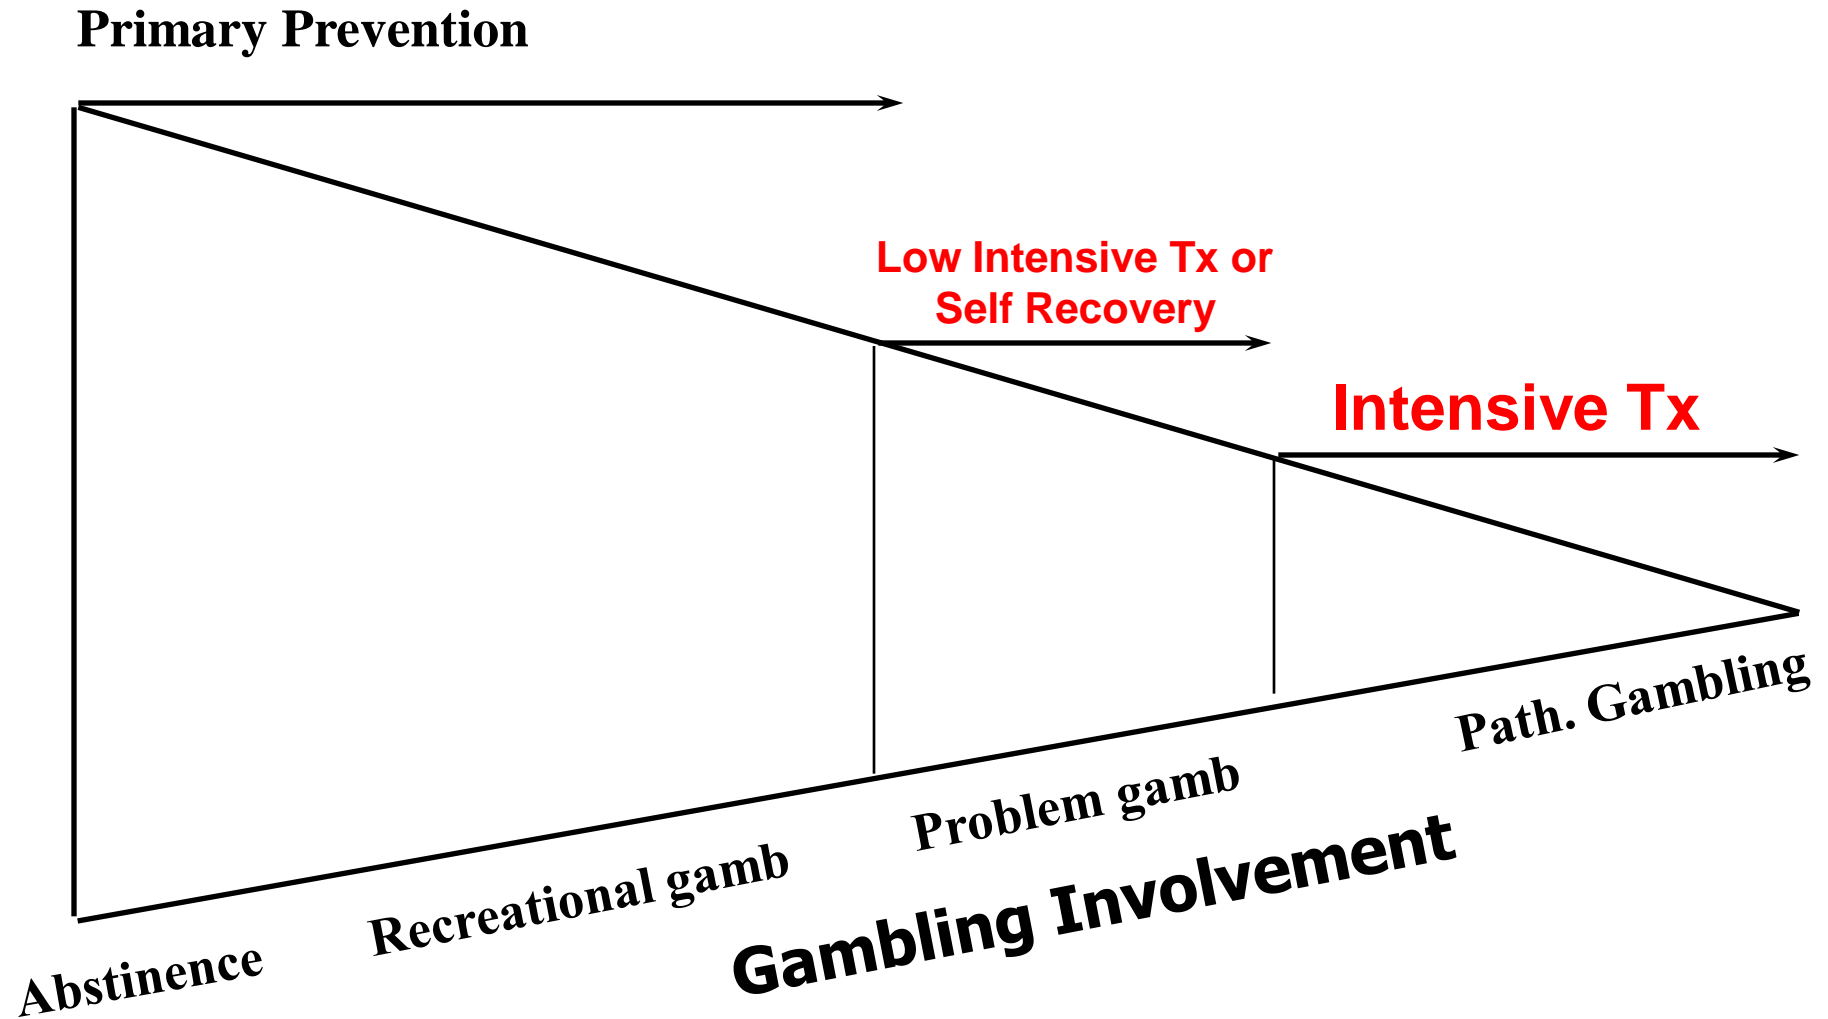

Principles of an Intervention

- **Meaningful persons are involved**
- **Each writes down specific facts about the events and behavior which are causing concern**
- **Each tells the individual how they feel about what is happening in their lives as a result of this behavior in a non-judgmental way**
- **Offer specific choices**
- **When the individual agrees to accept help, it is made available immediately**

Treatment Continuum

Adapted from Broadening the Base of Alcohol Treatment (IOM)

What clinical characteristics of problem gambling would be consistent with a referral for intensive treatment?

Out of control gambling

Previously failed low-intensive tx

Severe comorbidity

Other? _____

Core Elements of Treatment

- Match treatment intensity to problem severity
- Crisis stabilization
- Correct distorted cognitions
- Address relationship to money
- Address guilt, shame
- Group therapy
- Individual counseling
- Relapse prevention
- Continuing care

Treatment Approaches

- Spirituality-based (12 Steps/GA)
- Cognitive-behavioral
- Psychopharmacological treatment
- Self-directed
- Self-banning
- Financial counseling

Treatment Approaches

- **Spirituality-based (12 Steps/GA)**
- **Cognitive-behavioral**
- **Psychopharmacological treatment**
- **Self-directed**
- **Self-banning**
- **Financial counseling**

Treatment Approaches

- **GA specific issues**
 - **GA meetings provide needed support for money management, debt and restitution**
 - **How suitable is an AA meeting for a recovering PG?**

Treatment Approaches

Spirituality-based (12 Steps/GA)

- **Cognitive-behavioral**

Psychopharmacological treatment

Self-directed

Self-banning

Financial counseling

Treatment Approaches

■ Cognitive - Behavioral:

1. **Motivational interviewing**
2. **Cognitive restructuring**

Five principles of motivational interviewing

- Express Empathy
- Avoid Argumentation
 - Light confronting may be needed
- Roll with Resistance
- Support Self-efficacy
- Develop Discrepancy

(Miller and Rollnik)

Treatment Approaches

■ Cognitive - Behavioral:

1. Motivational interviewing
2. Cognitive restructuring

2. Cognitive restructuring

Gambler fallacy's (illusion of control of random events)

Biased attribution that winnings are caused by one's skill

Cognitive - Behavioral Strategies

- > insight about role of irrational thoughts

 - teach replacement cognitions

- > insight of functional role of gambling

Treatment Approaches

Spirituality-based (12 Steps/GA)

Cognitive-behavioral

- **Psychopharmacological treatment**

Self-directed

Self-banning

Financial counseling

Medications to Reduce Urge to Gamble

Naltrexone

Nalmafene

N-Acetyl Cysteine

Amino acid and precursor for glutathione synthesis

Glutamate release in the nucleus accumbens and glutamate's effects on dopamine (via the cystine-glutamate antiporters) involved in cocaine seeking behavior

NAC increases the activity of these antiporters

Treatment Approaches

Spirituality-based (12 Steps/GA)

Cognitive-behavioral

Psychopharmacological treatment

- **Self-directed**

Self-banning

Financial counseling

Treatment Approaches

Self-directed

- **Hodgins' program (U. of Calgary)**
 - Handbook mailed to problem gamblers
- **LaBrie's program (Harvard)**
 - Internet-based for problem gamblers

Treatment Approaches

Spirituality-based (12 Steps/GA)

Cognitive-behavioral

Psychopharmacological treatment

Self-directed

- **Self-banning**

Financial counseling

Treatment Approaches

Self-banning

- some venues (mainly casinos and some race tracks)
- written document prohibiting entrance
- some states: legal document with criminal consequences

Treatment Approaches

Spirituality-based (12 Steps/GA)

Cognitive-behavioral

Psychopharmacological treatment

Self-directed

Self-banning

- **Financial counseling**

Resources

Problem Gamblers and Their Finances: A Guide for Treatment Professionals (2000). Washington DC: National Council on Problem Gambling.

Pathological Gambling: Etiology, Comorbidity, and Treatment (Petry) (2005). Washington DC: American Psychological Association

Quiz

- If a nongambling spouse separates or divorces from the gambler, the spouse is not liable for the debts incurred by the gambler while they were married?

True _____

False _____

- Debts incurred by the gambler after divorce are solely the gambler's responsibility.

True _____

False _____

Financial Strategies for the Client

Limiting access to money used to gamble

Establishing spending plan

- **Shifting control of finances to the nongambler**

Setting up repayment plan

Avoiding bankruptcy

Financial Strategies for the Client

Shifting control of finances

Gambler agrees to live on a weekly cash budget

develop a spending plan

cutting expenses (sources of “poor spending”)

Nongambler

pays the household bills

is the only one with the new PIN on bank debit cards

signs up for identity theft protection (e.g., LifeLock.com)

Valuables stored in safe-deposit box

– **Legal transfer of assets**

Financial Strategies for the Client

Limiting access to money used to gamble

Establishing spending plan

Shifting control of finances to the nongambler

Setting up repayment plan

- **Avoiding bankruptcy**

Financial Strategies for the Client

Avoiding bankruptcy

Down sides

- can be viewed as an easy way to bail out of debts
- stains a person's financial record for years

If only realistic solution, consult with bankruptcy lawyer

- Chapter 13: workout plan

- Chapter 7: sell personal property (not home); debt wiped out, with some exceptions

Quiz

- Which debts are not erased with a Chapter 7 bankruptcy? (there are 4)
 - a. back federal taxes
 - b. back state taxes
 - c. alimony
 - d. child support
 - e. federal student educational loans
 - f. car loans

Financial Strategies for the Spouse/SO

Hide, cut up or cancel credit cards

Make sure this person is not a gambler and has good money management

On board with plans for “shifting control of finances” and “taking control of assets”

No more “bailouts”

Sidebar

Other ways a nongambler may “enable” a gambler:

Protect the gamblers behavior

Assumes responsibility

Rationalize the gambler’s self-deception

Cooperates by joining in the gambling

Rescues the gambler from emotional discomfort

Final Take Home Point

- Appreciate that PG is not simply a weakness of will power
- Use at least one standardized tool when conducting your clinical assessment
- Appreciate your training and skill level when faced with assessing and treating the various disorders **that co-exist with PG**

The treatment toolbox should include these skills:

cognitive-behavioral therapy

motivational interviewing skills

financial counseling
